

Physics

1. After each lesson review your lesson notes and make a note of everything that you don't understand so that you can ask about this before the next lesson. Locate and read the relevant material in the textbook (generally one lesson is equivalent to one double page spread). Add anything extra or interesting to the notes and complete end-of-spread questions if not done in class
2. Regularly use physics revision sites, locate the pages relevant to the material that you have been covering in lessons.
3. Useful sites are:
<https://www.bbc.co.uk/education/subjects/zpm6fg8>
https://www.youtube.com/results?search_query=crash+course+physics
<http://www.s-cool.co.uk/>
<http://www.physicsandmathstutor.com/>
4. These sites also have A-level information on them so start looking at this
5. Look at sites such as <https://www.physics.org/> , to read about wider applications of physics
6. Throughout the year, past paper questions with markschemes are made available at <http://www.aqa.org.uk/>. You should work through questions every week to test your knowledge, understanding and exam technique.
7. Use resources on <https://www.pixl.org.uk/> in order to consolidate and support your knowledge and understanding. Login details are:
